Education

International Institute of Information Technology, Hyderabad

B.Tech. in Computer Science and Engineering

Oct 2022 – Jul 2026

Hyderabad, India

Carmel School Kuwait

High School Diploma

Graduated Apr 2022

Kuwait City, Kuwait

Experience

Software Engineer

Jul 2026 – Present

Bridgera

Hyderabad, India

- Build backend components for an enterprise AI-agent platform, combining direct HTTP extraction, browser automation, and visual fallbacks to return validated structured data from third-party API less portals.
- Designed asynchronous, event-driven execution with **AWS Step Functions, Lambda, DynamoDB, S3, and Secrets Manager**, including explicit job states and resumable workflows.
- Developed multi-tenant source-profile APIs and data models for authentication requirements, reusable extraction strategies, enabling configuration-driven onboarding of new data sources.

Founder's Office Intern – Backend & AI Systems

May 2025 – Sep 2025

Qonfido

Remote, Bengaluru

- Built a financial insights service with **FastAPI and PostgreSQL** for real-time NSE market-data ingestion and automated user reporting.
- Worked directly with founders to develop a **RAG-based assistant** that retrieved context from financial data and documents for personalized investment insights.
- Developed analytics pipelines and RESTful admin endpoints for monitoring system health and downstream processing.

Software Intern

Jan 2024 – Apr 2024

Times Of Loans

Hyderabad, India

- Built a cross-platform payments application integrating **Firebase Authentication, Firestore, and Razorpay APIs** for secure payments and real-time user-data synchronization.

Projects

Legends of Stonks – Financial Platform | *FastAPI, PostgreSQL, Docker, Next.js*

Mar 2025 – Apr 2025

- Architected a microservices-based financial platform with a **FastAPI REST API** and PostgreSQL for user accounts, financial analytics, and simulated market transactions.
- Designed relational schemas and containerized services with **Docker and Nginx**; integrated CI/CD workflows for consistent deployment.

Custom Federated Learning Framework | *Python, Ray, PyTorch, WireGuard*

Sep 2025 – Present

- Designed a distributed training system with **Ray** for dynamic client registration, training, aggregation, and fault-tolerant task execution while keeping raw data isolated.
- Secured client-server communication with WireGuard and used LoRA adapters to reduce communication overhead during model updates.

Automated Refactoring Pipeline | *Python, Gemini, DeepSeek, Git*

Feb 2025

- Built an AI-assisted developer tool that detected code smells, generated refactoring recommendations, and integrated changes into Git pull-request workflows.

User Adherence to AI Financial Advisors | *Game Theory, MILP, Statistics*

Aug 2025 – Present

- Modeled advisor-user interactions as a Stackelberg game using bounded rationality and Prospect Theory to represent decisions under risk.
- Implemented MILP-based optimization and factorial experiments to compare advisor strategies and statistically evaluate their effect on user adherence.

Skills

Languages: Python, SQL, JavaScript/TypeScript, C/C++

Backend & Data: FastAPI, Node.js, REST APIs, PostgreSQL, DynamoDB, Data Modeling, Data Pipelines

Cloud & AI: AWS, Docker, Git, CI/CD, Linux, RAG, LLM Integration, PyTorch, Ray
